Pre-lab Questions	61
Experiment 9 Lab Report	62-66
<b>Table of Reagents</b>	67
CHEM350 Lab Course Questionnaire	71

## Welcome to Organic Chemistry 350's Laboratory Report Workbook

This report book, along with the 'Chemistry 350 Lab Manual', will help you prepare for the single weekend (~20h) of supervised lab instruction. All preparatory work in this report book (~12 h to finish, see list on page 3), must be completed and submitted to the Chemistry Lab Co-ordinator / Instructor prior to attending the labs, or just before the start of the Friday evening lab session.

In order to successfully complete the laboratory component, please be aware of the following 4 step process of instruction. It is the intention of this Chem350 Report Workbook to provide you with the means of completing all four steps.

### Step 1: First we tell you what you are going to do.

Find out by reading the lab manual, doing the pre-lab questions in this report book, and filling out the Table of Reagents etc., i.e., preparing for the labs at home. (By doing so you are able to work more efficiently in the lab and the over-all time spent in the supervised lab can be reduced to ~20 hours from the usually 32 hours.)

### Step 2: Next we show you how to do it.

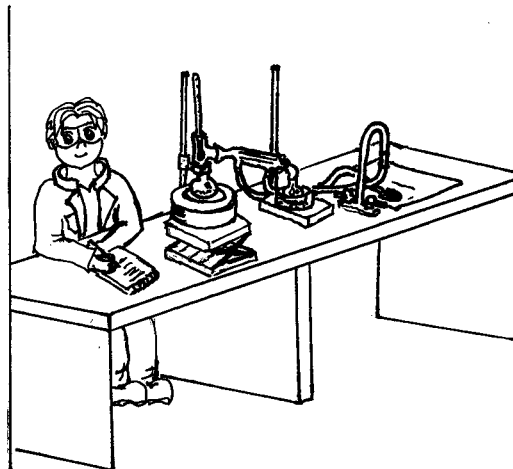

When you come to the lab, a lab instructor will give a safety orientation, followed by a series of mini lab lectures on each experiment. Various techniques will be demonstrated and you will be shown how to handle chemicals, dispose of hazardous waste, and operate the equipment.

## Introduction

### Step 3: Lab Time: Now you do what you've read, been told, and shown.

This is the time you spend in the lab performing your experiments, making your products, and recording your results in this report workbook.

### Step 4: Finally, you tell us what you did.

This is the report writing stage. Actually most of your reports will have been written while in the lab. At home you will only have to do your calculations, write your discussion and conclusion and answer the questions at the end of each experiment.

## Report Book Structure and How to Prepare for the Labs:

This CHEM350 Report Book is to be used in conjunction with the CHEM350 Organic Chemistry I Lab Manual. It consists of an Introduction, Experiment Report Forms, Table of Reagents and a Course Evaluation. The reports are to be **completed one month** after of the lab session you attended. As a safety precaution, it is advisable to photocopy your reports before mailing them to your tutor for marking. Note: the marked reports are not returned to you.

### How to best do the Report Book Exercises

1. First read through the lab manual introduction, and then answer the pre-lab questions for each experiment.
2. Complete the Objectives in the Experiment Report and begin to draft of your introduction.
3. Complete the Procedure (Refer to lab manual pages) and make a flowchart if necessary.
4. Complete the Table of Reagents for each experiment (detach a copy of the TOR to avoid flipping back and forth)
5. You are now ready to come to the lab and do the experimental work.

Note: Each experiment in the report book has the following headings:

Report Book Heading	Purpose and Use
1. Experiment Prelab Questions	Answer these questions to help you prepare and understand what you are doing in the lab. In order to answer these questions you will have to consult the CHEM350 Lab Manual, and to read the 'Introduction to Concept', and 'Background Information' sections of this manual. Complete all the questions, and submit for review just before attending the lab
2. Objectives	Lists what you should learn from the lab. (see also lab manual). Use this information to fill in 'Objectives' in your Lab Write-up. When appropriate, write out any chemical reactions.
3. Introduction	Briefly state how the objectives of the experiment will be achieved and provide the relevant background information.
4. Procedure	Refer to the lab manual and only note any modifications or changes. Fill out the Table of reagents. Use the flowchart procedural step table to record your work and observations.
The sections of your report shown below are completed while doing the experiment, or at home after the lab session.	
5. Results	While doing or immediately after your experiment, record your results in this section of the report.
6. Discussion and Conclusion	As soon after the lab as possible, discuss your results in light of the objectives, and make the appropriate conclusions. Remember to discuss sources of potential error and loss.
7. Post Lab Questions	Answer these questions to prove you understand what you did in the lab. To be completed after the experiment is finished. Submit your answers by mail along with your report and the Course Evaluation.

## Acknowledgements:

The grateful authors wish to especially thank Ms. Aimee Caouette for all the artwork. Athabasca University also wishes to thank Drs. K. Tanabe and T. Tamura and for all the IR Spectra used in this manual. They were obtained from the SDBS web site: <http://www.aist.go.jp/RIODB/SDBS/> (29-Sep-1999).

Each experiment has been modified and rewritten, keeping the particular needs of Athabasca University students in mind.

The procedures described in this manual have been checked in our Athabasca laboratories by Jerry Pyrozko, Roger Klemm, Glen Conlin, and Robert Carmichael. Special thanks to Ms. Aimee Caouette for her help on the IR Tutorial (Summer 1999). The comments and suggestions received from the individuals mentioned above were greatly appreciated by the Course Co-ordinator.

**Chem350 Experiment 1 Report****Date:** \_\_\_\_\_**Student Name:** \_\_\_\_\_**ID Number:** \_\_\_\_\_**Experiment 1 Prelab Questions:**

1. Why do we need to know the melting point of a substance?
  - a. To determine the exact time it takes for a sample to melt and what color the compound becomes.
  - b. To determine the purity of a sample, and its identity using the mixed melting point technique.
  - c. To identify and then determine the crystal lattice structure of a compound.
  
2. List the steps to prepare a melting point sample?
  - i)
  - ii)
  - iii)
  
3. What are three main concerns regarding melting point thermometers?
  - a. Accuracy, precision and fragility.
  - b. Room temperature readings, accuracy, and spilt mercury disposal.
  - c. Use for only mp determinations, they must be calibrated, and never heat above 250° C.
  
4. Define the temperatures recorded at the beginning and end of the melting point range.
  
  
5. In a CRC Handbook of Chemistry and Physics, the melting point of a compound is sometimes reported as a single number. What does this mean?
  - a. It's the midpoint value between the upper and lower limit of the melting point range.
  - b. It's the lower limit of the melting point range.
  - c. It's the upper limit of the melting point range.
  
6. The melting point apparatus should be heating at what rate (?°C/min) as it approaches the melting point of the compound?

**Chem350 Experiment 1 Report****Date:** \_\_\_\_\_**Student Name:** \_\_\_\_\_**ID Number:** \_\_\_\_\_**Title:****Objective(s):****Introduction:** (importance of mp, how one assesses purity using mp, mixed mp for ID, etc.)**Procedure:** Ref. format: (author, date. Title, publisher, page numbers)**Part A: Single melting point determination of unknown sample**

Procedural Step	Observations
1. Record unknown code number	
2. Record approximate melting point of the unknown	
3. Prepare melting point tube i) Crush the sample using a mortar and pestle before loading the melting-point tube ii) iii)	
4. Place tube in mp apparatus and heat sample	
5. Record your experimentally determined melting point.	

**Procedure (cont.):****Part B: Mixed melting point determination of an unknown sample**

Procedural Step	Observations
1. Record unknown code number and suggested candidates	
2. Literature Values of Unknown candidates	
3. Prepare melting point tubes	
4. Crush the sample using a mortar and pestle before loading the melting-point tube	
5. Record your experimentally determined melting point.	

**Table of Reagents for Exp. 1**

Reagent	Formula	Mwt. (g/mol)	mp (°C)	bp (°C)	Hazardous Properties
benzoic acid	C <sub>6</sub> H <sub>5</sub> COOH				Irritant
3-chlorobenzoic	ClC <sub>6</sub> H <sub>4</sub> COOH				Irritant
biphenyl	C <sub>6</sub> H <sub>5</sub> C <sub>6</sub> H <sub>5</sub>				Irritant
salicylic acid	HOC <sub>6</sub> H <sub>4</sub> COOH				Toxic, Irritant
<i>trans</i> -cinnamic acid					Irritant
2-methylbenzoic	CH <sub>3</sub> C <sub>6</sub> H <sub>5</sub> COOH				Irritant
4-nitrobenzaldehyde					Irritant
urea	NH <sub>2</sub> CONH <sub>2</sub>	60.06	133-135		Irritant
acetone (wash)	CH <sub>3</sub> COCH <sub>3</sub>			56.5	Flammable, Irritant

**Results:****Part A**

Melting point of sample # \_\_\_\_\_ = \_\_\_\_\_

**Part B**

Possible identity of unknown compound # \_\_\_\_\_:

1. \_\_\_\_\_ ; mp \_\_\_\_\_ (Reference: \_\_\_\_\_ )

2. \_\_\_\_\_ ; mp \_\_\_\_\_ (Reference: \_\_\_\_\_ )

Melting point of unknown compound # \_\_\_\_\_ = \_\_\_\_\_

Melting point obtained when unknown compound # \_\_\_\_\_ is mixed with

1. \_\_\_\_\_ = \_\_\_\_\_ (report range)

2. \_\_\_\_\_ = \_\_\_\_\_ (report range)

**Conclusion:**

(concluding statement, objectives achieved?)

The above results indicate that unknown compound #

\_\_\_\_\_ is probably \_\_\_\_\_.

(The structure of unknown \_\_\_\_\_ is drawn in the box.)

Structure of Unk.# \_\_\_\_\_

Structure of Unk.# _____

% recovery yield calculation:

**Discussion:**

Comments on and reasons for yield (high or low), and sources of error:

**Conclusion:**

Structure of Product

**Experiment 2 Questions:**

Answers to these questions should be submitted with your report.

1. The table below shows the solubility of a certain organic compound in water at five different temperatures.

Temperature (°C)	Solubility of compound (in 100 mL of water)
0	1.5 g
20	3.0 g
40	6.5 g
60	11.0 g
80	17.0 g

- a) Plot a graph of the solubility of the compound versus temperature. Draw a smooth curve through the data points.
- b) If a student attempts to recrystallize a 0.5 g sample of this compound by heating it to 80° C with 5.0 mL of water, would all of the sample dissolve? Briefly justify your answer.
- c) Assuming that the answer to part b is 'Yes', at what temperature will the crystals begin to appear when the student's solution begins to cool?
- d) If the student cooled the solution to 0° C and filtered off the crystals, what is the maximum possible percentage recovery? What mass of the sample will remain in the filtrate?
2. Explain why you should slowly cool the filtered saturated solution obtained in step 3 of the recrystallization procedure?
3. During the last step of the recrystallization procedure, you collect the crystals by vacuum filtration. Why do you use ice cold recrystallization solvent to help transfer all the crystals to the Büchner funnel and wash the crystals?
4. Briefly explain the circumstances under which a mixed solvent recrystallization method would be used to recrystallize a given compound.

**Discussion:**

Comments on and reasons for yield (high or low), sources of error (uncalibrated thermometer, atmospheric pressure effects):

**Conclusion:**

Structure of Products		

**Experiment 3 Questions:**

Answers to these questions should be submitted with your report.

1. A student who was performing a distillation for the first time failed to position the thermometer correctly. The bulb was set too high. What effect would this have on the observed boiling point of the liquid being distilled?
  
  
  
  
  
  
  
  
  
  
2. Under perfect conditions, the number of theoretical plates required to separate an ideal mixture of two components of boiling points  $T_A$  and  $T_B$  is given by the relationship:

$$\text{Number of theoretical plates needed} = \frac{120}{T_A - T_B}$$

On this basis, how many theoretical plates are needed to separate a mixture of cyclohexane and toluene? (Note: In practice, the actual number of theoretical plates required may be as high as double the number predicted by this equation!)

3. You suddenly notice you have forgotten to add boiling stones to your round bottomed distillation flask but the distillation is now in progress. What should you do?
  
  
  
  
  
  
  
  
  
  
4. What is the purpose of the condenser during a distillation?

**Chem350 Experiment 4 Report****Date:** \_\_\_\_\_**Student Name:** \_\_\_\_\_**ID Number:** \_\_\_\_\_**Experiment 4 Prelab Questions**

1. Name two ways to assess the purity of a liquid organic sample.
  - i)
  
  - ii)
  
2. The refractive index of a liquid is fundamentally based on the change of the speed of
  - a) flowing water
  - b) gaseous molecules
  - c) light

\_\_\_\_\_ as it passes from air into the liquid medium
  
3. The refractive index is dependent upon which two key factors?
  - i)
  
  - ii)
  
4. Which of the following sequences describes the correct order of the steps needed to measure a refractive index?
  - a. Turn on refractometer, apply sample, adjust side hand wheel, adjust thumb wheel, readjust side hand wheel, read meter
  - b. Turn on refractometer, apply sample, adjust thumb wheel for chromatic aberration, adjust side hand wheel, readjust side hand wheel, read meter
  - c. Turn on refractometer, adjust thumb wheel for chromatic aberration, adjust side hand wheel, apply sample, read meter
  
5. From the formulae provided below, choose the one which describes the correct method to calculate the percentage error in a refractive index measurement:
  - a)  $= \frac{|\text{actual value} - \text{theoretical value}|}{\text{theoretical value}} \times 100\% =$
  
  - b)  $= \frac{\text{actual value}}{\text{theoretical value}} \times 100\% =$
  
  - c)  $= \frac{|\text{theoretical value} - \text{actual value}|}{\text{actual value}} \times 100\% =$

Calculation of the percent mole fractions:

**Discussion:**

Comments on and reasons for high or low readings, %error, mole fraction results, assessment of the efficiency of the separation achieved in your fractional distillation, and sources of error:

**Conclusion:**

**Experiment 4 Questions:**

Answers are to be included with your report.

1. Look up the boiling points of cyclohexanol, cyclohexane and toluene in a suitable reference book and report your findings. Don't forget that when you quote a boiling point, melting point, or similar physical property you should always cite the source. Example:

1,3-Butadiene; b.p. = - 44 °C (*Handbook of Chemistry and Physics*, 47<sup>th</sup> ed. Cleveland, Ohio: The Chemical Rubber Co., 1966)

2. Suggest a reason why the boiling point of cyclohexanol is so much higher than those of cyclohexane and toluene.
3. Suggest a reason why the refractive index of cyclohexanol is higher than that of water.
4. To reduce the percentage error in the  $n_D$  reading of your purified cyclohexanol (compared to the literature value), what should you do?

**Chem350 Experiment 5 Report**

Date: \_\_\_\_\_

Student Name: \_\_\_\_\_

ID #: \_\_\_\_\_

**Experiment 5 Prelab Questions:**

1. What is the easiest way to separate two immiscible liquids?
  - a) use a ultracentrifuge.
  - b) use a Büchner funnel.
  - c) use a separatory funnel.
2. Fifty milliliters of 5% sodium hydroxide and dichloromethane were added to a separatory funnel. What would you observe?
  - a) a homogeneous, clear, and colourless solution
  - b) two layers of liquid, both clear and colourless
  - c) two layers of liquid, fizzing, and the separatory funnel would have to be immediately vented.

3. Given  $K = \frac{\text{concentration of solute in solvent A, e.g., (g} \cdot \text{L}^{-1})}{\text{concentration of solute in solvent B, e.g., (g} \cdot \text{L}^{-1})}$

The distribution coefficient for a compound in a two solvent extraction system is 2.0. If you are given 4.0 g of compound dissolved in 100 mL of solvent B, is the following answer correct for how much compound will be extracted, if you use 50 mL of solvent A for the extraction:

$$K = 2.0 = \frac{(x / 0.05\text{L})}{(4 - x) / 0.1\text{L}}, \text{ rearrange to solve for } x, = \frac{(8 - 2x)}{0.1\text{L}} = \frac{x}{0.05\text{L}} \text{ or } 0.1x = 0.05(8 - 2x), \text{ therefore, } 0.2x = 0.4 \text{ or } x = 2\text{g}$$

4. Why do we add 5% NaOH to extract the organic acid from the organic mixture?
5. Why do we add 1.5 M HCl to extract the organic base from the organic mixture?

**Experiment 5 Questions:**

Answers to be submitted with report.

1. When extracting an organic compound from an aqueous solution into an organic solvent, e.g., diethyl ether, a chemist will sometimes add sodium chloride to the aqueous solution. What is the purpose of such an addition, and what is the procedure called?
2. Why is the procedure used in this experiment called liquid-liquid extraction?
3. A CHEM350 student was working on her yield determination of her recrystallized *p*-aminobenzoic acid, when some naphthalene was inadvertently spilt into her crystals. You happen along the scene, and offer the following advice to the distraught student:
  - a) Redissolve all the solid in dichloromethane, extract with dilute aqueous acid, re-isolate the organic compound by precipitating the salt of the base with strong base, and recrystallize your *p*-aminobenzoic acid again.
  - b) Redissolve all the solid in dichloromethane, extract with dilute aqueous base, re-isolate the organic compound by precipitating the salt of the acid with strong acid and recrystallize *p*-aminobenzoic acid again.
  - c) Do either a or b.
  - d) Discard everything into the hazardous waste container. Nothing can be done.
4. When an aqueous solution of an organic compound is shaken with an immiscible organic solvent, such as diethyl ether, the solute distributes itself between the two phases. When the two phases separate into two distinct layers, an equilibrium will have been established such that the ratio of the concentrations of the solute in each solvent defines a constant, *K*, called the distribution coefficient (or partition coefficient).

$$K = \frac{\text{concentration of solute in solvent A, e.g., diethyl ether (g} \cdot \text{L}^{-1}\text{)}}{\text{concentration of solute in solvent B, e.g., water (g} \cdot \text{L}^{-1}\text{)}}$$

The distribution coefficient for compound X in the diethyl ether/water system is 3.0. If you were given a solution containing 8.0 g of X in 500 mL of water, and wanted to extract compound X into diethyl ether, show that it would be more effective to extract X using three 50 mL aliquots of diethyl ether rather than a single 150 mL aliquot. (HINT: Determine how much of X would remain in the aqueous solution in each case.)

**Chem350 Experiment 6 Report****Date:** \_\_\_\_\_**Student Name:** \_\_\_\_\_**ID Number:** \_\_\_\_\_**Experiment 6 Prelab Questions**

1. What does the Bromine Test detect?
2. What does the Baeyer Test detect?
3. What does the Ammoniacal Silver Test detect?
4. If a compound gives a positive reaction in all four tests it is most likely to be a
  - a) aldehyde
  - b) alkene
  - c) alkane
  - d) alkyne
5. If the compound does not react in any of the four tests, the compound is most likely to be :
  - a) alkene
  - b) carboxylic acid
  - c) alkane
  - d) alkyne
6. The sulfuric acid test is also a test used for determining an organic compounds solubility class (True or False).
7. Which reagent used in the functional group tests must be specially handled before discarding, and why?

**Experiment 6 Questions:**

Answers are to be submitted with your lab report.

1. The reaction of an alkene with acidic potassium permanganate is an example of a redox reaction. Use the method that you learned in a General Chemistry course to write out a balanced equation for the reaction below.

Half Rxns.

Bal. Equation:

---

2. The reaction of an alkene with potassium permanganate can also occur in a basic medium, in which case the inorganic product is a brown precipitate of manganese (IV) oxide. (The organic product is again the diol). Write a balanced redox equation for the reaction of an alkene with alkaline potassium permanganate.

Half Rxns.

Bal. Equation:

---

3. What are the major differences you would see in the infrared spectra of an alkane, alkene, and alkyne?

**Chem350 Experiment 7 Report**

ID Number: \_\_\_\_\_

**Experiment 7 Prelab Questions**

- Which of the following compounds is optically active:
  - ultra-pure water.
  - acetone.
  - tetrahydrofuran.
  - dichloromethane.
  - none of the above.
- The measured optical activity of a solid compound is affected by three major factors. They are:
  - concentration and temperature of the solution, and length of sample tube.
  - size of the molecule, natural source of chemical, and solubility.
  - density and temperature of compound, and length of sample tube.
- If 0.8000 g compound was dissolved in 50.00 mL of solvent, and the solution was placed in a 2 dm long sample tube, and gave an  $\alpha$  (observed rotation) of  $+3.2^\circ$ , what would the specific rotation be?
  - $+50^\circ$
  - $+100^\circ$
  - $+200^\circ$
  - $-1000^\circ$
- During the solid-liquid extraction of the lichen with acetone, the lab manual (p.83, Part A of lab manual) suggests we extract for 30 minutes. What would happen if the extraction went longer than 30 minutes?
- Why is all the extraction solvent removed prior to beginning the recrystallization part of the procedure?

benzophenone	(C <sub>6</sub> H <sub>5</sub> ) <sub>2</sub> CO	S	182.22	49-51			Irritant
benzoyl chloride	C <sub>6</sub> H <sub>5</sub> COCl	L	140.57	198	1.211	1.5530	Corrosive, toxic
benzyl alcohol	C <sub>6</sub> H <sub>5</sub> CH <sub>2</sub> OH	L	108.14	205	1.045	1.5400	Irritant, hygroscopic
benzyl amine	C <sub>6</sub> H <sub>5</sub> CH <sub>2</sub> NH <sub>2</sub>	L	107.16	184-185	0.981	1.5430	Corrosive, lachrymator
benzyl chloride	C <sub>6</sub> H <sub>5</sub> CH <sub>2</sub> Cl	L	126.59	179	1.1002		Hi.toxic, cancer susp.agent
biphenyl	C <sub>6</sub> H <sub>5</sub> C <sub>6</sub> H <sub>5</sub>	S	154.21	69-71	0.992		Irritant
boric acid	H <sub>3</sub> BO <sub>3</sub>	S	61.83		1.435		Irritant, hygroscopic
Brady's Reagent	(NO <sub>2</sub> ) <sub>2</sub> C <sub>6</sub> H <sub>3</sub> NHNH <sub>2</sub>	L		See hydrazine, 2,4-dinitrophenyl			
bromine	Br <sub>2</sub>	L	159.82	58.8	3.102		Highly toxic, oxidizer
butanal	CH <sub>3</sub> CH <sub>2</sub> CH <sub>2</sub> CHO	L	72.11	75			Flammable, corrosive
1,3-butadiene, E,E-1,4-diphenyl	C <sub>6</sub> H <sub>5</sub> C <sub>4</sub> H <sub>4</sub> C <sub>6</sub> H <sub>5</sub>	S	206.29	153			Irritant
butane, 1-bromo	CH <sub>3</sub> CH <sub>2</sub> CH <sub>2</sub> CH <sub>2</sub> Br	L	137.03	101.3	1.276	1.4390	Flammable, irritant
butane, 2-bromo	CH <sub>3</sub> CH <sub>2</sub> CHBrCH <sub>3</sub>	L	137.03	91.3	1.255	1.4369	Flammable, irritant

Table of Reagents

CHEM350 Report Book 2003-04

Compound Name	Chemical Formula	Solid (S) or Liquid (L)	Formula Weight	MP or BP (°C)	Density (g/mL)	Refract. Index	Hazardous Properties*	
butane, 1-chloro	CH <sub>3</sub> CH <sub>2</sub> CH <sub>2</sub> CH <sub>2</sub> Cl	L	92.57	78.4	0.886	1.4024	Flammable liquid	
butane, 2-chloro	CH <sub>3</sub> CH <sub>2</sub> CHClCH <sub>3</sub>	L	92.57	68.2	0.873	1.3960	Flammable liquid	
1-butanol	CH <sub>3</sub> CH <sub>2</sub> CH <sub>2</sub> CH <sub>2</sub> OH	L	74.12	117-118	0.810	1.3990	Flammable, irritant	
2-butanol	CH <sub>3</sub> CH <sub>2</sub> CHOHCH <sub>3</sub>	L	74.12	99.5-100	0.807	1.3970	Flammable, irritant	
2-butanone	CH <sub>3</sub> CH <sub>2</sub> COCH <sub>3</sub>	L	72.11	80	0.805	1.3790	Flammable, irritant	
2-butanone, 3-hydroxy-3-methyl	(CH <sub>3</sub> ) <sub>2</sub> C(OH)COCH <sub>3</sub>	L	102.13	140-141	0.971	1.4150	Irritant	
1-butene, 3-chloro-	CH <sub>3</sub> CH(Cl)CH=CH <sub>2</sub>	L	90.55	62-65	0.900	1.4155	Flammable, lachrymator	
3-buten-2-ol	CH <sub>2</sub> =CHCH(OH)CH <sub>3</sub>	L	72.11	96-97	0.832	1.4150	Flammable, irritant	
<i>n</i> -butyl butyrate	C <sub>3</sub> H <sub>7</sub> CO <sub>2</sub> C <sub>4</sub> H <sub>9</sub>	L	144.21	164-165	0.871	1.4060	Irritant	
3-buten-2-ol, 2-methyl	CH=CC(CH <sub>3</sub> ) <sub>2</sub> OH	L	84.12	104	0.868	1.4200	Flammable, toxic	
<b>calcium carbonate</b>	CaCO <sub>3</sub>	S	100.99		2.930		Irritant, hygroscopic	
calcium chloride, anhydr.	CaCl <sub>2</sub>	S	110.99		2.150		Irritant, hygroscopic	
camphor (1R, +)	C <sub>10</sub> H <sub>16</sub> O	S	152.24	179-181	0.990	1.5462	Flamm., irritant	
carbon dioxide, solid	CO <sub>2</sub>	S	44.01	-78.5(subl.)			Frost bite burns	
carbon tetrachloride	CCl <sub>4</sub>	L	153.82	76	1.594		Susp. cancer agent	
charcoal (Norit)		S	Decolourizing agent, used in recrystallizations					Irritant
chloroform	CHCl <sub>3</sub>	L	119.38	61.3	1.500		Highly toxic	
cinnamaldehyde, <i>trans</i>	C <sub>6</sub> H <sub>5</sub> CH=CHCHO	L	132.16	246(decomp)	1.048	1.6220	Irritant	
cinnamic acid, <i>trans</i>	C <sub>6</sub> H <sub>5</sub> CH=CHCO <sub>2</sub> H	S	148.16	135-136			Irritant	
crotonaldehyde	CH <sub>3</sub> CH=CHCHO	L	70.09	102.4	0.846	1.4365	Highly toxic, flammable.	
cyclohexane	C <sub>6</sub> H <sub>12</sub>	L	84.16	80.7	0.779	1.4260	Flammable, irritant	
cyclohexane, bromo	C <sub>6</sub> H <sub>11</sub> Br	L	163.06	166.2	1.324	1.4950	Flammable, irritant	
cyclohexane, methyl	C <sub>6</sub> H <sub>11</sub> CH <sub>3</sub>	L	98.19	101	0.770	1.4220	Flammable, irritant	
cyclohexene	C <sub>6</sub> H <sub>10</sub>	L	82.15	83	0.811	1.4460	Flammable, irritant	
cyclohexanol	C <sub>6</sub> H <sub>11</sub> OH	L	100.16	161.1	0.963	1.4650	Irritant, hygroscopic	
cyclohexanone	C <sub>6</sub> H <sub>10</sub> (=O)	L	98.15	155.6	0.947	1.4500	Corrosive, toxic	
cyclohexanone, 4-methyl	CH <sub>3</sub> C <sub>6</sub> H <sub>9</sub> (=O)	L	112.17	170	0.914	1.4460	Corrosive, toxic	
cyclopentane	C <sub>5</sub> H <sub>10</sub>	L	70.14	49.5	0.751	1.4000	Flammable, irritant	
cyclopentane, bromo	C <sub>5</sub> H <sub>9</sub> Br	L	149.04	137-138	1.390	1.4881	Flammable	
cyclopentanone	C <sub>5</sub> H <sub>8</sub> (=O)	L	84.12	130.6	0.951	1.4370	Flammable, irritant	
<b>dichloromethane</b>	CH <sub>2</sub> Cl <sub>2</sub>	L	84.93	40.1	1.325	1.4240	Toxic, irritant	
diethyl ether (see ethyl ether)	C <sub>2</sub> H <sub>5</sub> OC <sub>2</sub> H <sub>5</sub>	L	74.12	34.6	0.708	1.3530	Flammable, toxic	
1,4-dioxane	C <sub>4</sub> H <sub>8</sub> O <sub>2</sub>	L	88.11	100-102	1.034	1.4220	Flamm., cancer susp.agent	
diphenylmethanol	(C <sub>6</sub> H <sub>5</sub> ) <sub>2</sub> CH(OH)	S	184.24	65-67			Irritant	
<b>ethyl acetate</b>	CH <sub>3</sub> CO <sub>2</sub> C <sub>2</sub> H <sub>5</sub>	L	88.11	76-77	0.902	1.3720	Flammable, irritant	
ethyl alcohol, anhydrous	CH <sub>3</sub> CH <sub>2</sub> OH	L	46.07	78.5	0.785	1.3600	Flammable, poison	
ethyl ether, absolute	CH <sub>3</sub> CH <sub>2</sub> OCH <sub>2</sub> CH <sub>3</sub>	L	74.12	34.6	0.708	1.3530	Flammable, irritant	
<b>fluorene</b>	C <sub>13</sub> H <sub>10</sub>	S	166.22	114-116			Irritant	
formaldehyde (sol'n)	HCHO	L	30.03	96	1.083	1.3765	suspect. cancer agent	
formamide, N,N-dimethyl	HCON(CH <sub>3</sub> ) <sub>2</sub>	L	73.10	149-156	0.9487	1.4310	suspect. cancer agent	
furfuryl amine	(C <sub>4</sub> H <sub>3</sub> O)CH <sub>2</sub> NH <sub>2</sub>	L	97.12	145-146	1.099	1.4900	Irritant	
<b>gold</b>	Au	S	196.97	1064	19.28		Expensive/valuable	
<b><i>n</i>-hexane</b>	CH <sub>3</sub> (CH <sub>2</sub> ) <sub>4</sub> CH <sub>3</sub>	L	86.18	69	0.659	1.3750	Flammable, irritant	
hydrazine, 2,4-dinitrophenyl	(NO <sub>2</sub> ) <sub>2</sub> C <sub>6</sub> H <sub>3</sub> NHNH <sub>2</sub>	70% soln	198.14				Flammable, irritant	
hexanes	C <sub>6</sub> H <sub>14</sub>	L	86.18	68-70	0.672	1.3790	Flammable, irritant	
hydrochloric acid, conc. 12 M	HCl	L	36.46		1.20		Corrosive, highly toxic	
<b>iodine</b>	I <sub>2</sub>	S	253.81	133	4.930		Corrosive, highly toxic	
lichen		S					Allergen	
ligroin (high bp petrol. ether)	C <sub>6</sub> -C <sub>7</sub> (light naphtha)	L		60-80	0.656	1.3760	Flammable, irritant	
Lucas Reagent		Solution	of hydrochloric acid/zinc chloride (from zinc dust)					Toxic, irritant
<b>magnesium (metal)</b>	Mg	S	24.31	651	1.75		Flammable	
magnesium oxide	MgO	S	40.31		3.58		Moist. sens., irritant	
magnesium sulfate, anhydrous	MgSO <sub>4</sub>	S	120.37		2.660		Hygroscopic	
magnesium sulfate, 7-hydrate	MgSO <sub>4</sub> ·7H <sub>2</sub> O	S	246.48		1.670		(epsom salt)	
manganese dioxide	MnO <sub>2</sub>	S	86.94	535 (dec.)	5.026		Oxidizer, irritant	
methanol, anhyd.	CH <sub>3</sub> OH	L	32.04	64.5	0.791	1.3290	High. toxic, flammable	
methanol, diphenyl	(C <sub>6</sub> H <sub>5</sub> ) <sub>2</sub> CH(OH)	S	184.24	69			Irritant	
methanol, triphenyl	(C <sub>6</sub> H <sub>5</sub> ) <sub>3</sub> C(OH)	S	260.34	164.2			Irritant	

Compound Name	Chemical Formula	Solid (S) or Liquid (L)	Formula Weight	MP or BP (°C)	Density (g/mL)	Refract. Index	Hazardous Properties*	
methylene chloride	CH <sub>2</sub> Cl <sub>2</sub>	L	84.93	40.1	1.325	1.4230	See dichloromethane	
mineral spirits (light kerosene)	C <sub>12</sub> -C <sub>14</sub>	L		179-210	0.752	1.4240	Flammable, irritant	
<b>naphthalene</b>	C <sub>10</sub> H <sub>8</sub>	S	128.17	80.5			Flamm., susp.cancer agent	
nitric acid (conc. 15.4 M)	HNO <sub>3</sub>	L	63.01		1.400		Corrosive, oxidizer	
<b>2-octanone</b>	CH <sub>3</sub> (CH <sub>2</sub> ) <sub>5</sub> COCH <sub>3</sub>	L	128.22	173	0.819	1.4150	Irritant	
<b>pentane</b>	C <sub>5</sub> H <sub>12</sub>	L	72.15	36.1	0.626	1.3580	Flammable, irritant	
3-pentanol	C <sub>2</sub> H <sub>5</sub> CH(OH)C <sub>2</sub> H <sub>5</sub>	L	88.15	115/749mm	0.815	1.4100	Flammable, irritant	
3-penten-2-one, 4-methyl	(CH <sub>3</sub> ) <sub>2</sub> C=CHCOCH <sub>3</sub>	L	98.15	129	0.858	1.4450	Flammable, lachrymator	
petroleum ether, (Skelly B)	Mixt. of C <sub>5</sub> -C <sub>6</sub>	L		35-60	0.640		Flammable, toxic	
petroleum ether, hi bp (ligroin)	Mixt. of C <sub>6</sub> -C <sub>7</sub>	L		60-80	0.656	1.3760	Flammable, toxic	
phenethyl alcohol	C <sub>6</sub> H <sub>5</sub> CH <sub>2</sub> CH <sub>2</sub> OH	L	122.17	221/750mm	1.023	1.5320	Toxic, irritant	
phenol	C <sub>6</sub> H <sub>5</sub> OH	S	94.11	40-42	1.071		Highly toxic, corrosive	
phenol, 2,4-dimethyl	(CH <sub>3</sub> ) <sub>2</sub> C <sub>6</sub> H <sub>3</sub> OH	S	122.17	22-23	1.011	1.5380	Corrosive, toxic	
phenol, 2,5-dimethyl	(CH <sub>3</sub> ) <sub>2</sub> C <sub>6</sub> H <sub>3</sub> OH	S	122.17	75-77	0.971		Corrosive, toxic	
phenylacetylene	C <sub>6</sub> H <sub>5</sub> C≡CH	L	102.14	142-144	0.930	1.5490	Flamm., cancer susp.agent	
phenylmagnesium bromide	C <sub>6</sub> H <sub>5</sub> MgBr	L	181.33		1.134		Flammable, moist.sensit.	
phosphoric acid (85%, 14.7 M)	H <sub>3</sub> PO <sub>4</sub>	L	98.00		1.685		Corrosive	
potassium chromate	K <sub>2</sub> CrO <sub>4</sub>	S	194.20	968	2.732		Canc.susp.agent, oxidizer	
potassium dichromate	K <sub>2</sub> Cr <sub>2</sub> O <sub>7</sub>	S	294.19	398			Hi.toxic, canc.susp.agent	
potassium hydroxide	KOH	S	56.11				Corrosive, toxic	
potassium iodide	KI	S	166.01	681	3.130		Moist.sens., irritant	
potassium permanganate	KMnO <sub>4</sub>	S	158.04	d<240	2.703		Oxidizer, corrosive	
propane, 2-chloro, 2-methyl	(CH <sub>3</sub> ) <sub>2</sub> CCl	L	92.57	50	0.851	1.3848	Flammable	
propane, 2-nitro	(CH <sub>3</sub> ) <sub>2</sub> CHNO <sub>2</sub>	L	89.09	120	0.992	1.3940	Canc.susp.agent, flamm.	
2-propanol, 2-methyl-	(CH <sub>3</sub> ) <sub>2</sub> COH	L	74.12	82.3	0.7887		Flammable, irritant	
propionate, ethyl	C <sub>2</sub> H <sub>5</sub> CO <sub>2</sub> C <sub>2</sub> H <sub>5</sub>	L	102.13	99	0.891	1.3840	Flammable, irritant	
propionic acid	C <sub>2</sub> H <sub>5</sub> CO <sub>2</sub> H	L	74.08	141	0.993	1.3860	Corrosive, toxic	
<b>rosaniline hydrochloride</b>	C <sub>20</sub> H <sub>14</sub> (NH <sub>2</sub> ) <sub>3</sub> Cl	Solution	337.86	250 (dec)			Susp. cancer agent	
<b>salicylic acid</b>	HOC <sub>6</sub> H <sub>4</sub> CO <sub>2</sub> H	S	138.12	158-160			Toxic, irritant	
salicylic acid, acetate ester	CH <sub>3</sub> CO <sub>2</sub> C <sub>6</sub> H <sub>4</sub> CO <sub>2</sub> H	S	180.16	138-140			Irritant, toxic	
Schiff's Reagent		Solution	of roseaniline hydrochloride & sulfur dioxide					Toxic
silane, tetramethyl	Si(CH <sub>3</sub> ) <sub>4</sub>	L	88.23	26-28	0.648	1.3580	Flammable, hygroscopic	
silica, sand	SiO <sub>2</sub>	S	60.09	NA			abrasive	
silver nitrate	AgNO <sub>3</sub>	S	169.88	212	4.352		Highly toxic, oxidizer	
sodium acetate	CH <sub>3</sub> CO <sub>2</sub> Na	S	82.03				hygroscopic	
sodium bisulfite	NaHSO <sub>3</sub>	S			1.480		Severe irritant	
sodium borohydride	NaBH <sub>4</sub>	S	37.38	400			Flam. solid, corrosive	
sodium bicarbonate	NaHCO <sub>3</sub>	S	84.01		2.159		Moist. sensitive	
sodium carbonate	Na <sub>2</sub> CO <sub>3</sub>	S	105.99	851	2.532		Irritant, hygroscopic	
sodium chloride	NaCl	S	58.44	801	2.165		Irritant, hygroscopic	
sodium dichromate, dihydrate	Na <sub>2</sub> Cr <sub>2</sub> O <sub>7</sub> ·2H <sub>2</sub> O	S	298.00		2.350		Hi.toxic, cancer susp.agent	
sodium hydrogen carbonate	NaHCO <sub>3</sub>	S	84.01		2.159		See sodium bicarbonate	
sodium hydroxide	NaOH	S	40.00				Corrosive, toxic	
sodium iodide	NaI	S	149.89	661	3.670		Moist.sens., irritant	
sodium metabisulfite	Na <sub>2</sub> S <sub>2</sub> O <sub>5</sub>	S	190.10		1.480		Moist.sens., toxic	
sodium methoxide	NaOCH <sub>3</sub>	S	54.02				Flam. solid, corrosive	
sodium sulfate	Na <sub>2</sub> SO <sub>4</sub>	S	142.04	884	2.680		Irritant, hygroscopic	
styrene	C <sub>6</sub> H <sub>5</sub> CH=CH <sub>2</sub>	L	104.15	146	0.909		Flammable	
styrene, β-bromo	C <sub>6</sub> H <sub>5</sub> CH=CHBr	L	183.05	112/20mm	1.427	1.6070	Irritant	
sucrose	C <sub>12</sub> H <sub>22</sub> O <sub>11</sub>	S	342.30	185-187			Tooth Decay!	
sulfur dioxide	SO <sub>2</sub>	Gas	64.06	-10 bp			Nonflamm, corrosive	
sulfuric acid (conc. 18 M)	H <sub>2</sub> SO <sub>4</sub>	L	98.08		1.840		Corrosive, oxidizer	
sulfurous acid	H <sub>2</sub> SO <sub>3</sub>	L	82.08		1.030		Corrosive, toxic	
<b>L-tartaric acid</b>	HO <sub>2</sub> CC <sub>2</sub> H <sub>2</sub> (OH) <sub>2</sub> CO <sub>2</sub> H	S	150.09	171-174			Irritant	
tetrahydrofuran	C <sub>4</sub> H <sub>8</sub> O	L	72.11	65-67	0.889	1.4070	Flammable, irritant	
tetramethylsilane	Si(CH <sub>3</sub> ) <sub>4</sub>	L	88.23	26-28	0.648	1.3580	Flammable, hygroscopic	
tin	Sn	S	118.69		7.310		Flammable solid, moist.sens.	
Tollen's Reagent		L	See ammonia + silver nitrate					

## Table of Reagents

## CHEM350 Report Book 2003-04

Compound Name	Chemical Formula	Solid (S) or Liquid (L)	Formula Weight	MP or BP (°C)	Density (g/mL)	Refract. Index	Hazardous Properties*
toluene	C <sub>6</sub> H <sub>5</sub> CH <sub>3</sub>	L	92.14	110.6	0.867	1.4960	Flammable, toxic
toluene, 4-nitro	NO <sub>2</sub> C <sub>6</sub> H <sub>4</sub> CH <sub>3</sub>	S	137.14	52-54	1.392		Hi.toxic, irritant
<i>o</i> - or 2-toluic acid	CH <sub>3</sub> C <sub>6</sub> H <sub>4</sub> CO <sub>2</sub> H	S	136.15	103-105			Probable irritant
<i>p</i> - or 4-toluic acid	CH <sub>3</sub> C <sub>6</sub> H <sub>4</sub> CO <sub>2</sub> H	S	136.15	180-182			Probable irritant
triethylphosphite	(C <sub>2</sub> H <sub>5</sub> O) <sub>3</sub> P	L	166.16	156	0.969	1.4130	Moist. sens., irritant
triphenylmethanol	(C <sub>6</sub> H <sub>5</sub> ) <sub>3</sub> C(OH)	S	260.34	160-163			Probable irritant
<b>urea</b>	NH <sub>2</sub> CONH <sub>2</sub>	S	60.06	135	1.335		Irritant
(-) usnic acid	C <sub>18</sub> H <sub>16</sub> O <sub>7</sub>	S	344.32	198			Toxic
(+) usnic acid	C <sub>18</sub> H <sub>16</sub> O <sub>7</sub>	S	344.32	201-203			Toxic
<b>water</b>	H <sub>2</sub> O	L	18.02	100		1.33	Will burn skin when hot
water, ice	H <sub>2</sub> O	S/L	18.02	0	1.00		Frostbite, hypothermia
xylenes	CH <sub>3</sub> C <sub>6</sub> H <sub>4</sub> CH <sub>3</sub>	L	106.17	137-144	0.860	1.4970	Flammable, irritant
zinc dust	Zn	S	65.37	419.5			Flammable, moist.sens.

\*Be sure to consult the chemical's MSDS for more specific detail on hazardous properties.

**Organic Chemistry I, Chemistry 350 Laboratory Course Questionnaire**

**Lab Session Type (circle):**      **Weekend or Weeklong**

The Centre for Natural and Human Science would appreciate your confidential help in improving our laboratory program. Please complete the following questionnaire by circling one of the following responses on a scale of 1-5:

Strongly agree (5), Agree (4), Neutral (3), Disagree (2), Strongly Disagree (1)

Submit the completed questionnaire by mail to the Science Lab Coordinator at: Centre for Science, 1University Drive, Athabasca University, Athabasca, AB, T9S 3A3.

**Please rate the Lab Instructor(s) in the items specified below:**

1. The lab instructor was competent and made the experiments interesting and instructional.  
Strongly agree (5), Agree (4), Neutral (3), Disagree (2), Strongly Disagree (1)
2. The instructor presented an overview of the laboratory exercise in an interesting and helpful manner, pointing out likely problems in the lab procedure at the start of the experiment and stressing safety precautions.  
Strongly agree (5), Agree (4), Neutral (3), Disagree (2), Strongly Disagree (1)
3. The lab instructor speaks clearly and understandably.  
Strongly agree (5), Agree (4), Neutral (3), Disagree (2), Strongly Disagree (1)
4. The lab instructor circulates through the lab during the experiments and actively monitors our work.  
Strongly agree (5), Agree (4), Neutral (3), Disagree (2), Strongly Disagree (1)
5. The instructor treated me with respect.  
Strongly agree (5), Agree (4), Neutral (3), Disagree (2), Strongly Disagree (1)
6. Overall, my instructor was effective.  
Strongly agree (5), Agree (4), Neutral (3), Disagree (2), Strongly Disagree (1)

**Please rate the Lab Course in the items specified below by circling the appropriate number or letter:**

7. The Chem350 Laboratory Manual was easy to read and understandable.  
Strongly agree (5), Agree (4), Neutral (3), Disagree (2), Strongly Disagree (1)
8. The Chem350 Laboratory Report Book was easy to read and understandable.  
Strongly agree (5), Agree (4), Neutral (3), Disagree (2), Strongly Disagree (1)
9. Working on the procedure and table of reagents in the Chem350 Report Book before coming to the lab helped me understand what to do in the laboratory and what the dangers are in each experiment.  
Strongly agree (5), Agree (4), Neutral (3), Disagree (2), Strongly Disagree (1)
10. The information required to answer the pre-lab questions in the Chem350 Report Book was easy to find.  
Strongly agree (5), Agree (4), Neutral (3), Disagree (2), Strongly Disagree (1)
11. I found the whole Chem350 weekend lab session very rushed and poorly organized.  
Strongly agree (5), Agree (4), Neutral (3), Disagree (2), Strongly Disagree (1)
12. Recording my results was made easy by the prepared/formatted tables in the results section.  
Strongly agree (5), Agree (4), Neutral (3), Disagree (2), Strongly Disagree (1)

**Organic Chemistry I Chemistry 350 Laboratory Course Questionnaire (cont.)**

13. Which experiment did you enjoy the most?
- Melting Point Determination
  - Recrystallization
  - Distillation and Refractive Index
  - Organic Acid/Base Separations
  - Cyclohexene from cyclohexanol
  - Extraction of Usnic Acid
  - Nitration of Acetanilide
14. Which experiment did you like the least?
- Melting Point Determination
  - Recrystallization
  - Distillation and Refractive Index
  - Organic Acid/Base Separations
  - Cyclohexene from cyclohexanol
  - Extraction of Usnic Acid
  - Nitration of Acetanilide
15. From which experiment did you learn the most?
- Melting Point Determination
  - Recrystallization
  - Distillation and Refractive Index
  - Separations
  - Cyclohexene from cyclohexanol
  - Usnic Acid
  - Nitration of Acetanilide
16. From which experiment did you learn the least?
- Melting Point Determination
  - Recrystallization
  - Distillation and Refractive Index
  - Separations
  - Cyclohexene from cyclohexanol
  - Usnic Acid
  - Nitration of Acetanilide
17. Working on the experiment with a lab partner improved my understanding of the experiment and overall knowledge of organic chemistry.  
Strongly agree (5), Agree (4), Neutral (3), Disagree (2), Strongly Disagree (1)
18. I had many questions that went unanswered while I was in the lab.  
Strongly agree (1), Agree (2), Neutral (3), Disagree (4), Strongly Disagree (5)
19. I would recommend to a friend to take Athabasca University's organic chemistry course.  
Strongly agree (5), Agree (4), Neutral (3), Disagree (2), Strongly Disagree (1)
20. Overall, the laboratory component is a valuable part of AU's organic chemistry course.  
Strongly agree (5), Agree (4), Neutral (3), Disagree (2), Strongly Disagree (1)

Do you have any other comments to add about your instructor(s) or this Chem350 laboratory course?
